Torre, Alfonso de la. Vision
delectable. [Spanish]
[Burgos. 1485?]- (114.917)

Ticknor

Map T-388

Transferred from D.160A.88

FADRIQUE DE BASILEA

TORRE, ALFONSO DE LA. Vision delectable.

Before 1487.

Haebler 644.

Printed with gothic type, in two columns, 44 lines in each. It has 71 leaves; the size of a leaf is 230×168 mm., and the text in a column measures 183×38 mm. Empty spaces are left for ornamental initials.

Alfonso de la Torre was a native of the diocese of Burgos. From 1437 till his death in 1460 he was a member of the College of San Bartholomé at Salamanca. He wrote his treatise called the *Delectable Vision* about 1440 at the request of Juan de Beaumonte, prior of the monastery of San Juan in Navarre, for the instruction of the Prince of Viana, the son of John, King of Navarre and Aragon.

The full title of the work is *Visión Delectable de la Filosofía y Artes Liberales Metafísica y Filosofía Moral*, and the author intended it to be, as he states "a brief compendium of all human knowledge, especially of all that touches upon moral science and man's duty, the soul and its immortality." It is written in the form of an allegory, in which the author imagines an infant brought into the world in sin and ignorance, receiving his education from the figures of Grammar, Logic, Music, Astrology, Truth, and Nature. "The work shows a good deal of the learning of its time," Ticknor writes, "and still more of the acuteness of the scholastic metaphysics then in favor. But it is awkward and uninteresting in the general structure of its fiction, and meagre in its style and illustrations."

The volume bears neither the date and place of its printing nor the name of the printer. Ticknor thought that it was printed by Centenera at Zamora about 1483. Haebler, however, has found that the type was used by Fadrique of Basel, not before 1483 and not later than 1487. Fadrique was no other person than Friedrich Biel, once associated with Michael Wenssler in Basel. He worked in Burgos till 1517, and his later productions in which he used many woodcuts are typographically excellent.

The volume is extremely rare. Haebler knows of three copies only — one in the British Museum, the second in the library of the University of Coimbra, and the third in the Biblioteca Nacional in Madrid — the last lacking the first two leaves with the Table of Contents. The book in the Boston Public Library is complete.

George Ticknor's copy.

(Continued on next page)

1. The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atom. It is shown that the structure of the atom is determined by the laws of quantum mechanics, and that the laws of quantum mechanics are in agreement with the experimental facts.

2. The second part of the paper is devoted to a discussion of the application of the theory of the structure of the atom to the study of the properties of the elements of the periodic system. It is shown that the theory of the structure of the atom can be used to explain the periodicity of the properties of the elements, and that it can be used to predict the properties of the elements which have not yet been discovered.

3. The third part of the paper is devoted to a discussion of the application of the theory of the structure of the atom to the study of the properties of the compounds of the elements. It is shown that the theory of the structure of the atom can be used to explain the properties of the compounds of the elements, and that it can be used to predict the properties of the compounds which have not yet been discovered.

4. The fourth part of the paper is devoted to a discussion of the application of the theory of the structure of the atom to the study of the properties of the solutions of the elements. It is shown that the theory of the structure of the atom can be used to explain the properties of the solutions of the elements, and that it can be used to predict the properties of the solutions which have not yet been discovered.

5. The fifth part of the paper is devoted to a discussion of the application of the theory of the structure of the atom to the study of the properties of the solids of the elements. It is shown that the theory of the structure of the atom can be used to explain the properties of the solids of the elements, and that it can be used to predict the properties of the solids which have not yet been discovered.
